What is the Return on Investment for Fintech Builder Events?

Why we need this now?

Return on Investment

What it Looks Like

How to do it

STOCKHOLM GROWTH & FINTECH

A Lovable Like Builder Event

The Growth Constraint for Nordic Fintechs is Ecosystem Leverage.

- Capital efficiency pressure is pushing fintechs to prioritize ecosystem-driven growth.
- Mid-size fintechs must differentiate beyond pricing
- AI has created problems in talent recruitment
- APIs are commoditized unless developers build meaningful use cases.
- It is difficult to conceptualize tangible Use Cases for Clients

ALEXANDRA.

APIs Are Everywhere.
Meaningful Use Cases Are Not.

What does it look & feel like?

- We built powerful infrastructure, but people only use part of it
- We're competing on price and uptime instead of imagination
- We need better use-case storytelling
- We need more developer and builder interest

ALEXANDRA.

Fintech Compete for Builders — Not Just Customers.

Why does a builder event, edge a company in talent recruitment?

- **Product Velocity is a Competitive Weapon**
- **Signal technical ambition**
- **Offer experimentation platforms**
- **Top builders today are attracted to AI-native companies**
- **Help solve the problem of: “Our dev portal exists, but we don’t have a community.”**

ALEXANDRA.

Ecosystem depth makes a company harder to displace. Building community with partnered companies increases share in the market.

ALEXANDRA.

Nordic Fintech Needs Real-World Experimentation — Real imagination. Use-cases that make the power of data tangible- make it as exciting as it really is.

ALEXANDRA.

In this capital-efficient environment, how are you approaching developer mindshare?

Lovable In-Person Event

Why Fintech Growth Now Depends on Builder Ecosystems

APIs Don’t Create Ecosystems. Builders Do

Capital Efficiency Changes The Effort to Raise Large VC Rounds

Curated Builder Labs are Strategic for Innovation

Building a Developer Community, Creates Long Term Resilience

Use-cases Building is Useful and Partner Co-hosting is also Useful.

How to do it?

A Lovable Like Builder Event

Right now, I am gathering interest

- Price depends on the number of co-hosts.
- The more co-hosts the better. More reach, more distribution, lower cost.
- I make the administration for the event coordination easy and help coordinate our market launch.
- Success is about co-collaboration & creating a team. This makes the event effort low and the impact high.
- It doesn’t have to be with Lovable, but Lovable- as a company- is easy to work with!

A Lovable Like Builder Event

Rough Costs & Effort

Hosting it alone:
*not recommended because then requires ad-spend to get high interest participants. Roughly 450K-600K sek.

Hosting it with 3 other companies in the Ecosystem:
Better ROI, better reach. Costs roughly 70-120K sek per host. Easier to accomplish and has more momentum.
