17 PRINCIPLES · NORDIC FINTECH EXAMPLES · LINES TO USE

THE NORDIC FINTECH SALES PLAYBOOK

Why psychology sells

what selling isn't.

so you've found your ICP and booked the meeting.

BUT selling is not convincing.

it is not pressure, tricks or a clever close.

fintech buyers move money for a living —

they can smell a script from Malmö to Tromsø.

HOWEVER every buyer is **human**.

they **anchor**. they **fear loss**. they **follow peers**.

they **defend what they already have**.

psychology isn't how you trick a buyer.

it's how you **remove friction**

between a good product and a yes.

use it to make the truth easier to see —

never to hide it.

Contents

Seventeen principles in four chapters. Each one explained in plain words, applied to B2B fintech sales, and shown in a Nordic example.

HOW TO READ EACH PRINCIPLE

Why it works — the research behind it

In the wild — a public, cited example

Say it — a line to borrow

In fintech sales — how to apply it

Scene — an illustrative moment

Watch out — where it backfires

The Nordic buyer

Every principle in this playbook works in the Nordics. Just turn it down one notch.

They decide together.

A decision is *förankrat* — anchored across the team — before anyone signs. Expect more people in the process and a longer middle of the cycle.

Hype backfires.

Jantelagen is real: overclaiming reads as untrustworthy. Understatement plus proof beats superlatives every time.

They already live in fintech.

BankID, MitID, Swish, MobilePay, Vipps. Your buyer pays a friend in seconds — and expects your onboarding to feel the same.

Hierarchy is flat.

The CFO may forward your email to the controller and genuinely ask what she thinks. Sell to the room, not just the title.

Trust is high — and fragile.

Buyers start out believing you. Break that once and, in markets this small, the whole finance community hears about it.

Risk is the first lens.

Regulated money means auditors, compliance and the board are part of the deal, whether you ever meet them or not.

How buyers see

Nobody judges a price, a risk or a product in a vacuum. They judge it against whatever you put next to it.

01 Anchoring	p. 06
02 Framing	p. 07
03 Gain frame	p. 08
04 Loss frame	p. 09
05 Priming	p. 10
06 Decoy pricing	p. 11

Anchoring

The first number on the table becomes the ruler every later number is measured against.

WHY IT WORKS

People estimate by starting from a reference point and adjusting — and they rarely adjust far enough. In Tversky and Kahneman's classic study, a spin of a wheel of fortune shifted people's guesses about the share of UN members that were African. Even a random anchor pulls.

IN FINTECH SALES

Anchor on the size of the problem before you reveal your price. If the buyer's first number is your licence fee, everything after it is a cost. If it's the cash stuck in late invoices, your fee becomes a fraction of something bigger.

NORDIC EXAMPLE — IN THE WILD

INTRUM · STOCKHOLM

Credit manager Intrum publishes a European Payment Report every year. The 2026 edition, built on 8,385 companies in 20 countries, found that around 12% of revenue arrives late. A receivables seller who opens with that figure — then asks for the buyer's own — borrows a credible anchor before naming a price.

SAY IT

“Before we get to price: Intrum's latest survey says about 12% of revenue arrives late. Where are you on that?”

WATCH OUT

Anchor with real numbers that fit this buyer. An inflated anchor gets exposed in procurement — and in a market this small, the story travels.

Framing

Same facts, different picture. The frame decides which part of the truth the buyer sees first.

WHY IT WORKS

In the famous “disease problem”, 72% chose a programme described as saving 200 of 600 people. Described as 400 people dying — the same outcome — only 22% chose it. Frames live in the unit, the comparison and the reference point: gain or loss.

IN FINTECH SALES

Choose the unit before the meeting. A per-user monthly price feels like running costs; an annual contract total feels like a new hire. Neither is dishonest, but one invites a quick yes and the other a committee. Match how the buyer budgets.

NORDIC EXAMPLE — IN THE WILD

PLEO · COPENHAGEN

Spend-management company Pleo prices every plan per user, per month — from £8 on its English-language pricing page — rather than as one company total. The unit maps onto headcount, which is exactly how a finance lead will explain the cost to the rest of the leadership team.

SAY IT

“Per person, that’s [PRICE] a month. How many hours does each of them spend on receipts today?”

WATCH OUT

Choose the frame, never hide the total. Nordic procurement will annualise your price anyway — say the yearly figure before they do.

Gain frame

Tell the buyer what they get. It works best when the move already feels safe.

WHY IT WORKS

Message-framing research suggests gain frames persuade best when an action feels low-risk and its outcome fairly certain. A gain invites people to say yes to something good, instead of defending against something bad — a lighter load for an easy decision.

IN FINTECH SALES

Use gain frames with growth-minded buyers — founders, CEOs, heads of e-commerce — and in expansion deals where trust already exists. Talk in outcomes they can picture: cash on the account, hours back, a checkout that converts.

NORDIC EXAMPLE — IN THE WILD

QRED · STOCKHOLM

Small-business bank Qred sells pure gain: apply for a business loan in a few minutes, confirm with BankID, payout within 24 hours. There's no lecture about what a slow bank costs you — just the picture of capital arriving while the opportunity is still open.

SAY IT

“Picture closing the books on day three instead of day ten. What would your team do with that week?”

WATCH OUT

Gains must be concrete and believable. Every “up to” invites the question “and what's typical?” — have the median ready.

Loss frame

Tell the buyer what standing still costs. It works best when risk is already on their mind.

WHY IT WORKS

Losses weigh more than equal gains, so a benefit framed as a loss avoided feels more urgent. Framing research suggests loss frames do best when the decision feels uncertain — the exact state of a CFO or risk lead weighing a new supplier.

IN FINTECH SALES

Quantify the leak: card fees paid, fraud absorbed, days of cash stuck in receivables, hours lost to manual reconciliation. Work it out with the buyer, in their numbers. A loss they found themselves persuades far more than one you claim.

NORDIC EXAMPLE — IN THE WILD

TRUSTLY · STOCKHOLM

Pay-by-bank company Trustly runs both frames on one homepage. One line is pure gain: conversion rates of up to 98%. The next is a loss made smaller: fraud risk brought down to 0.012%. The head of e-commerce reads the first line; the CFO and the risk team read the second.

SAY IT

“Every month this stays the same, about [AMOUNT] sits in unpaid invoices. Does your board know that number?”

WATCH OUT

Fear without an exit freezes people. Pair every loss with one small, clear next step — or the buyer protects themselves by doing nothing.

Priming

What the buyer meets first quietly shapes how they read everything after it.

WHY IT WORKS

Meeting one idea makes related ideas quicker to reach — see “bread” and you recognise “butter” faster. That effect is robust. Some famous behavioural versions, like old-age words making people walk slower, failed to replicate. Use priming for context, not mind control.

IN FINTECH SALES

Everything before the demo primes it: the subject line, the first slide, the logos on screen, the question you open with. Open on security and you’ll be judged on security; open on speed and you’ll be judged on speed. Choose on purpose.

NORDIC EXAMPLE — IN THE WILD

TINK · STOCKHOLM

Open-banking platform Tink puts “a Visa solution” in its homepage headline, ahead of any feature. Three words prime scale, security and regulatory weight — so the 6,000+ bank connections that follow read as dependable infrastructure, not a start-up’s promise.

SAY IT

“Before the demo — what would make this a safe decision for your team?” Now everything you show is read through safe.

WATCH OUT

Priming sets the stage; it can’t rescue a weak product. And skip the studies that didn’t replicate — your buyers may have read the critiques too.

Decoy pricing

Add an option nobody should pick, and the one beside it suddenly looks obvious.

WHY IT WORKS

A decoy is clearly worse than one option but not the other. In Dan Ariely's classroom test of Economist subscriptions, a print-only offer priced the same as print-plus-web made the bundle the top pick. Remove the decoy, and most chose the cheaper web-only plan.

IN FINTECH SALES

Send three options. Make your target the best value, and add one that is clearly weaker for almost the same money — the target's price, minus a module the buyer told you they need.

NORDIC EXAMPLE — SCENE

ILLUSTRATIVE · STOCKHOLM

An accounts-payable vendor sends a CFO three options. The middle one is just SEK 400 cheaper than the full package but lacks the ERP sync she asked for. Beside it, Complete looks like the obvious buy.

CORE

SEK 4,000 / mo

Invoice capture

APPROVALS · DECOY

SEK 6,500 / mo

Capture + approvals, no
ERP sync

COMPLETE · TARGET

SEK 6,900 / mo

Capture + approvals +
ERP sync

SAY IT

“Approvals costs almost the same as Complete, but without the ERP sync you said you need. Which fits how you work?”

WATCH OUT

Every tier must be real and sellable. Field studies find the effect weaker than in the lab — and a fake tier insults a CFO who reads pricing for a living.

What buyers feel

Buying is a bet. Buyers fear losing more than they love winning — and they hold on tight to what they already have.

07 Loss aversion	p. 13
08 The endowment effect	p. 14
09 Status quo bias	p. 15
10 Scarcity	p. 16

Loss aversion

Losing SEK 10,000 hurts more than winning SEK 10,000 feels good. Roughly twice as much.

WHY IT WORKS

Prospect theory showed that losses loom larger than equal gains; later estimates put the ratio at about two to one. It's why "do nothing" wins so many deals: the buyer weighs the risk of a bad purchase far above the upside of a good one.

IN FINTECH SALES

Your product is a potential loss too: implementation risk, migration pain, the career cost of a failed rollout. Shrink the buyer's downside as hard as you sell the upside — pilots, exit terms, migration help, references who've done it.

NORDIC EXAMPLE — IN THE WILD

QRED · STOCKHOLM

Qred removes the losses a business owner might imagine before they get the chance to imagine them: no start-up fees, no hidden costs, no binding period. The message is less about what you gain and more about what you can't lose by trying.

SAY IT

"What would have to be true for trying this to feel completely safe for you?"

WATCH OUT

Don't manufacture fear. Use loss aversion to remove the buyer's risks — never to invent new ones.

The endowment effect

People value what they own — even if they've only owned it for ten minutes.

WHY IT WORKS

In the classic mug experiments, students handed a coffee mug asked more than twice as much to sell it as others would pay to buy the very same mug. Ownership — even brief, even of something trivial — raises value.

IN FINTECH SALES

Let buyers own something before they buy: a trial on their own data, a configured workspace, a pilot card in their wallet. Once their transactions, rules and reports live in your product, it stops being yours. It's theirs.

NORDIC EXAMPLE — IN THE WILD

FORTNOX · VÄXJÖ

Accounting platform Fortnox, with more than half a million customers, gives companies under three months old its bookkeeping software free for six months. After half a year of receipts, invoices and VAT returns, the books feel like the company's own — and leaving means leaving them behind.

SAY IT

“Let's load last month's real transactions into a trial, so you judge your own numbers — not our demo data.”

WATCH OUT

Free must be truly free, and leaving must be easy. Trap-shaped trials are remembered — and talked about.

Status quo bias

Your biggest competitor isn't another vendor. It's "we'll keep doing what we do."

WHY IT WORKS

People stick with the current option far more than its merits justify. Change takes effort, carries risk and puts someone's name on the decision; staying put does none of that. In B2B the default is Excel, the house bank and the old ERP.

IN FINTECH SALES

Make the status quo visible and costly, then make the switch small. Map today's process with the buyer, name each manual step out loud, and offer a migration plan with dates and owners — so moving feels like a project, not a leap.

NORDIC EXAMPLE — IN THE WILD

BOGFØRINGSLOVEN · DENMARK

Denmark's Bookkeeping Act took the default away. Businesses have had to move to registered digital bookkeeping systems in phases — from July 2024 for most annual-report filers to January 2026 for sole traders with turnover above DKK 300,000. When the law makes "keep doing what we do" expensive, the sale shifts from why to change to how.

SAY IT

"Walk me through what happens today, from receipt to booked entry. Who touches it, and how long does it sit?"

WATCH OUT

Never mock the current way — someone in the room built it. Respect the old system, then show what keeping it costs.

Scarcity

What's rare, ending or limited looks more valuable — and gets decided faster.

WHY IT WORKS

In a classic study, identical cookies were rated more desirable when they came from a jar holding two than from one holding ten. Scarcity signals value and triggers loss aversion: miss this, and it's gone.

IN FINTECH SALES

Use real scarcity only: a regulatory deadline, a dated price change, limited implementation capacity before year-end close, a pilot cohort with fixed seats. Fake countdowns are easy to spot and hard to forgive.

NORDIC EXAMPLE — IN THE WILD

BOKFØRINGSLOVEN · NORWAY

Norway's Storting voted on 1 June 2026 to make B2B e-invoicing mandatory. From 1 January 2027, businesses must send structured e-invoices (EHF, over Peppol) to recipients listed in the ELMA register. For invoicing and AP vendors selling in Norway this autumn, the deadline is the scarcity — no invented countdown needed.

SAY IT

“Your Norwegian entities must send EHF invoices from January. Working back, when does a new process need to be live?”

WATCH OUT

Never invent a deadline. Pressure makes Nordic buyers slow down: real dates calm them, fake ones end the conversation.

Who buyers trust

In B2B, nobody wants to go first or go alone. Trust is built by giving, by showing who else said yes — and in small steps.

11 Reciprocity

p. 18

12 Social proof

p. 19

13 Commitment & consistency

p. 20

Reciprocity

Give first. People feel a pull to return what they've been given.

WHY IT WORKS

The norm of reciprocity shows up in every culture studied. In Dennis Regan's experiment, people handed an unexpected Coca-Cola by a stranger later bought about twice as many raffle tickets from him. The gift was small; the obligation wasn't.

IN FINTECH SALES

Give something genuinely useful before you ask: a benchmark of their payment costs, a cash-flow review, a policy template, an honest look at their current setup. The best gifts help even if the buyer never signs.

NORDIC EXAMPLE — IN THE WILD

PLEO · COPENHAGEN

Pleo offers a free Expense Policy Builder that helps any company draft spending rules — travel, food, accommodation, events, remote setup, gifts — tailored to the business. It solves a real finance chore at no cost, and puts Pleo in the room just as the company decides how spending should work.

SAY IT

“Whatever you decide about us, I’ve mapped your payment costs against [BENCHMARK]. Want me to walk you through it?”

WATCH OUT

A gift with a hook isn't a gift. If the “free audit” is a disguised pitch, reciprocity turns into resentment.

Social proof

When unsure, people look at what others like them have done.

WHY IT WORKS

Uncertainty makes us copy. In hotel studies, telling guests that most others reused their towels beat environmental appeals — and “most guests who stayed in this room” did better still. The closer the others, the stronger the pull.

IN FINTECH SALES

In B2B the most persuasive proof is a peer: same country, same size, same ERP, same regulator. For a Gothenburg logistics CFO, one named reference from a Gothenburg logistics firm beats a global logo wall.

NORDIC EXAMPLE — IN THE WILD

KLARNA · PLEO · TINK

Nordic fintechs lead with numbers. Klarna announced in March 2026 that it had passed 1 million merchants. Pleo’s pricing page says it is trusted by 40,000+ companies across Europe. Tink shows customers such as Revolut, Adyen and Bank Norwegian. Big numbers open the door — a peer reference closes it.

SAY IT

“[PEER] in [CITY] went live in [WEEKS]. Their CFO is happy to take a call — shall I introduce you?”

WATCH OUT

Never use a logo without permission or round a number up. In the Nordics, everyone knows someone who works there.

Commitment & consistency

Small yeses lead to bigger ones. People act in line with what they've already said and done.

WHY IT WORKS

In the foot-in-the-door study, homeowners who first agreed to a small safe-driving sign were far more likely to later accept a large, ugly “Drive Carefully” billboard on their lawn. Once we commit, our self-image shifts — and we act to stay consistent with it.

IN FINTECH SALES

Build a ladder of small, voluntary, ideally written commitments: agree the problem in an email recap, book the data review, run a two-week pilot with success criteria the buyer wrote. Each step easy to say yes to — and visible to their team.

NORDIC EXAMPLE — IN THE WILD

TINK · STOCKHOLM

Tink's homepage invites developers to create a free Console account and get started straight away. A developer who signs up, tests in the sandbox and builds a prototype has made three small commitments. By the time sales talk production, the team is extending its own work — not starting a new purchase.

SAY IT

“So the real issue is month-end reconciliation, not card spend. Shall I write that down as the pilot's goal?”

WATCH OUT

Commitments must be freely given. Pressured yeses don't stick — they quietly reverse in the steering group.

How buyers talk

Four tools from the negotiation table. Listen until the real objection surfaces — and never take away the buyer's right to choose.

14 Tactical empathy

p. 22

15 Labeling

p. 23

16 Mirroring

p. 24

17 Reactance

p. 25

Tactical empathy

Understand the buyer's situation and feelings — and say so — before you try to change anything.

WHY IT WORKS

Former FBI hostage negotiator Chris Voss built his method on one observation: people who feel understood calm down and open up. It isn't agreeing or sympathising. It's showing you see the world from their side — including fears they haven't said aloud.

IN FINTECH SALES

Before the pitch, map the buyer's real situation: the audit next month, the controller who just left, the board asking for cuts, the risk of being the one who picked the failed vendor. Speak to that, not to your feature list.

NORDIC EXAMPLE — SCENE

ILLUSTRATIVE · OSLO

A CFO goes quiet when the rep mentions moving away from the house bank. Instead of pushing, the rep says: "It sounds like the bank relationship matters beyond the product." The CFO relaxes — yes, there's a credit line tied to it. The real objection is finally on the table.

SAY IT

"It seems the bigger worry isn't the tool — it's what happens if the rollout lands during year-end close."

WATCH OUT

Empathy used as a trick is noticed fast. If you don't care about the answer, don't ask the question.

Labeling

Name the emotion you observe — “it seems like...” — and watch it lose its grip.

WHY IT WORKS

Brain-imaging research by Matthew Lieberman’s team found that putting feelings into words dampens activity in the amygdala, the brain’s alarm system. Voss made it a negotiation tool: label the fear, and the buyer no longer has to defend it.

IN FINTECH SALES

Use neutral openers — “It seems like...”, “It sounds like...”, “It looks like...” — never “I hear that you...”, which makes it about you. Then stop talking. The silence after a label is where the real answer arrives.

NORDIC EXAMPLE — SCENE

ILLUSTRATIVE · AARHUS

Midway through a demo, a finance director keeps returning to audit trails. The rep pauses: “It sounds like the last system change caused trouble with your auditors.” She exhales — it did, two years ago. Now the rep knows what the deal is really about.

SAY IT

“It seems like you’ve been burned before by a vendor that over-promised.”

WATCH OUT

Label what you see, not what you assume. A wrong label is fine — they’ll correct it — but a judging one (“you seem confused”) closes the door.

Mirroring

Repeat the last one to three words the buyer said, as a gentle question — and they'll keep talking.

WHY IT WORKS

We warm to people who seem like us. In one restaurant study, a waitress who repeated customers' orders back word for word earned noticeably bigger tips. Voss uses the repeat as a prompt: it shows you're listening and invites the buyer to expand, without you steering.

IN FINTECH SALES

Mirror when you hear a loaded word — “messy”, “the board”, “last time” — and resist the urge to fill the pause. You'll learn more in the next thirty seconds than from your whole discovery script.

NORDIC EXAMPLE — SCENE

ILLUSTRATIVE · HELSINKI

A head of treasury says: “Our FX handling is fine, mostly.” The rep replies: “Mostly?” Ninety seconds later she has described two subsidiaries, three banks and a spreadsheet only one person understands. That's the business case.

SAY IT

Buyer: “We'd need sign-off from group.”
You: “Sign-off from group?”

WATCH OUT

Mirror sparingly. Repeat every sentence and you sound like a parrot — or like someone who just finished a sales course.

Reactance

Push on someone's freedom to choose, and they push back — even against their own interest.

WHY IT WORKS

Reactance theory says that when people feel a freedom is threatened, they act to restore it — often by doing the opposite. The flip side: a meta-analysis of 42 studies found that simply reminding people they're free to refuse makes a yes more likely.

IN FINTECH SALES

Protect autonomy out loud. Offer choices, not ultimatums. Ask no-oriented questions — “Would it be a bad idea to...?” — which feel safe, because saying no feels like protection. In flat, consensus cultures, pressure reads as disrespect.

NORDIC EXAMPLE — SCENE

ILLUSTRATIVE · STOCKHOLM

Two days before quarter-end, a rep asks a CFO to “sign by Friday to lock the price.” The reply: “Then we'll pass.” Next quarter, a new approach: “Would it be a bad idea to set a date for your steering group to decide — whatever they decide?” They pick a date. And keep it.

SAY IT

“It's completely your call. Would it be a bad idea to bring your controller into the next meeting?”

WATCH OUT

Reactance hits your champion too. Corner them in front of their team, and they'll defend their independence by defending the status quo.

Cheat sheet

01 Anchoring

Set the first number: the cost of the problem.

03 Gain frame

Show the upside when the move already feels safe.

05 Priming

Open on the thing you want to be judged on.

07 Loss aversion

Shrink their downside as hard as you sell the upside.

09 Status quo bias

Make today's cost visible and the switch small.

11 Reciprocity

Give something useful, even if they never buy.

13 Commitment & consistency

Build a ladder of small, written yeses.

15 Labeling

"It seems like..." — then stay quiet.

17 Reactance

Protect their choice. Ask no-oriented questions.

02 Framing

Choose the unit and the comparison before the meeting.

04 Loss frame

Show what standing still costs when risk is on their mind.

06 Decoy pricing

Three real options; one makes the target obvious.

08 The endowment effect

Let them own it first: their data, their workspace.

10 Scarcity

Real deadlines and real capacity only.

12 Social proof

A nearby peer beats a global logo wall.

14 Tactical empathy

Say their situation out loud before your pitch.

16 Mirroring

Repeat their last few words as a question.

THE GOLDEN RULE

*Make the truth easier to see.
Never hide it.*

Sources

“In the wild” examples come from public company pages, press releases and reports, checked in October 2026. Prices and figures change — re-check before quoting them to a buyer. “Scene” examples are illustrative, not real deals.
